                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Johns D.C., Feldman A.M.; "Identification of a highly conserved region at the 5' flank of the phospholamban gene.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE=93008802; PubMed=1394867; Grupp I., Kim H.W., Ferguson D.G., Ganim J.R., Luo W., Ponniah S., Grupp I., Kim H.W., Ferguson D.G., Kadambi V., Neumann J.C., Doetschman T., Kranias E.G.; "Mouse phospholamban gene expression during development in vivo and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   in vitro.";

Circ. Res. 71:1021-1030(1992).

-!- FUNCTION: Phospholamban has been postulated to regulate the activity of the calcium pump of cardiac sarcoplasmic reticulum.
-!- SUBGNIT: Homopentamer.
-!- SUBCNIT: Homopentamer.
-!- SUBCNIT: Homopentamer.
-!- TISSUE SPECIFOITY: Heart.
-!- TISSUE SPECIFOITY: Heart.
-!- PPIM: Phosphorylated in response to beta-adrenergic stimulation.
-!- SIMILARITY: Belongs to the phospholamban family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE=93284726; PubMed=8508530;

                                                                                                                                                                                                                                                                                                                                                                                                                     Blocken, J. 262:353-356(1989).

-!- FUNCTION: Phospholamban has been postulated to regulate the activity of the calcium pump of cardiac sarcoplasmic reticulum.
-!- SUBGNAT: Homopentamer.
-!- SUBCELLULAR LOCATION: Membrane.
-!- TISSUE SPECIFICITY: Heart.
-!- PTM: Phosphorylated in response to beta-adrenergic stimulation.
-!- PTM: Phosphorylated in response to seta-adrenergic stimulation.
-!- SIMILARITY: Belongs to the phospholamban family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

J. Biol. Chem. 266:5375-5383(1991).

-.- FUNCTION: Phospholamban has been postulated to regulate the cartivity of the calcium pump of cardiac sarcoplasmic reticulum.
-.- SUBUNIT: Homopentamer.
-.- SUBCELLULAR LOCATION: Membrane.
-.- TISSUE SPECIFICITY: Heart.
-.- TISSUE SPECIFICITY: Heart.
-.- PTM: Phosphorylated in response to beta-adrenergic stimulation.
-.- SIMILARITY: Belongs to the phospholamban family.

"Complete genome sequence and comparative analysis of the industrial microorganism Streptomyces avermitilis.";
"I FUNCTION: This protein is located at the 305-50S ribosomal subunit interface and may play a role in the structure and function of the aminoacyl-tRNA binding site (By similarity).
"I SINILARITY: Belongs to the L19P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its
Parro V., Mellado R.P.;
Submitted (FEB-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: This protein is located at the 30S-50S ribosomal subunit
interface and may play a role in the structure and function of the
aminoacyl-tRNA binding site (By similarity).
-!- SIMILARITY: Belongs to the L19P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      STRAINEATCO 35210 / B31;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nature 390:580-586 (1997).

-!- FUNCTION: This protein is located at the 308-50S ribosomal subunit interface and may play a role in the structure and function of the aminoacyl-tRNA binding site (By similarity).

-!- SIMILARITY: Belongs to the L19P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Borrelia burgdorferi (Lyme disease spirochete).

18 Bis (S-nucleosyl)-tetraphosphatase, symmetrical (EC 3.6.1.41)
(Diadenosine tetraphosphatase) (Ap4A hydrolase) (Diadenosine 5',5''-
P1,P4-tetraphosphate pyrophosphoyrolase).
                                                                                                                                                                                                                                             "Genome sequence of Chlamydophila caviae (Chlamydia psittaci GPIC):
examining the role of niche-specific genes in the evolution of the
Chlamydiaceae.";

"Nucleic Acids Res. 31:2134-2147(2003).

-!- CATALYTIC ACTIVITY: Phosphatidyl-L.serine =
phosphatidylethanolamine + CO(2).

-!- COFACTOR: Pyruvoyl group (By similarity).

-!- SIMILARITY: Belongs to the phosphatidylserine decarboxylase
family. Subfamily 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Submitted (JAN-1998) to the EMBL/GenBank/DDBJ databases.
-!- PONCTION: Hydrolyzes diadenosine 5',5''-Pl,P4-tetraphosphate to yield ADP (By similarity).
-!- CATALYTIC ACTIVITY: P(1),P(4)-bis(5'-adenosyl)tetraphosphate + H(2)O = 2 ADP.
-!- SIMILARITY: Belongs to the Ap4A hydrolase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

"Comparison of the genomes of two Xanthomonas pathogens with differing host specificalities.";
Nature 417.459-463(2002).
-!- FUNCTION: The sigma factor is an initiation factor that promotes attachment of the RNA polymerase to specific initiation sites and then is released. This is the primary sigma-factor of this bacteria (By similarity).
-!- SIMILARITY: Belongs to the sigma-70 factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Salvini M., Bini E., Santucci A., Batistoni R.,
"H4 histone in the macronucleus of Blepharisma japonicum (Protozoa,
"ilophora, Heterotithida).";
FEMS Microbiol. Lett. 149:93-98 (1997).
-!- FUNCTION: Histone H4.
-in nucleosome formation.

"H4 histone in the macronucleus of Blepharisma japonicum (Protozoa, Ciliophora, Heterotrichida).";
FEMS Microbiol. Left. 149:93-98(1997).
-!- FUNCTION: Histone H4, along with histone H3, plays a central role in nucleosome formation.
-!- SUBUMIT: The nucleosome is an octamer containing two molecules each of H2A, H2B, H3 and H4. The octamer wraps approximately 146
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
-!- SUBUNIT: The nucleosome is an octamer containing two molecules each of H2A, H2B, H3 and H4. The octamer wraps approximately 146 bp of DNA.
                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PROSITE; PS00047; HISTONE H4; PARTIAL.

-!- FUNCTION: This protein is located at the 305-50S ribosomal subunit interface and may play a role in the structure and function of the aminoacyl-tRNA binding site (By similarity).
-!- SIMILARITY: Belongs to the L19P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Genome Res. [13:1572-1579(2003).

-!- FUNCTION: This protein is located at the 30S-50S ribosomal subunit interface and may play a role in the structure and function of the aminoacy1-tRNA binding site (By similarity).

-!- SIMILARITY: Belongs to the L19P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Comparative complete genome sequence analysis of the amino acid replacements responsible for the thermostability of Corynebacterium efficiens.";

                                                                                                                                                                                                                                                                                                               -!- SUBUNIT: PP2A consists of a common heterodimeric core enzyme, composed of a 36 kDa catalytic subunit (subunit C) and a 65 kDa constant regulatory subunit (PR65 or subunit A), that associates with a variety of regulatory subunits. Proteins that associate with the core dimer include three families of regulatory subunits B (the R2/B/R55/B55, R3/B'/PR72/PR13/PR59 and R5/B'/B56 amilies), the 48 kDa variable regulatory subunit, viral proteins, and cell signaling molecules.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- TISSUE SPECIPICITY: Widely expressed with the highest expression in heart and skeletal muscle.
-!- PTM: Phosphorylated on serine residues.
                                                                                      Zolnierowicz S., van Hoof C., Andjelkovic N., Cron P., Stevens I., Merlevede W., Goris J., Hemmings B.A.;
"The variable subunit associated with protein phosphatase 2A0 defines a novel multimember family of regulatory subunits.";
Biochem. J. 317:187-194(1996).
                                                                                                                                                                                                                                  both nucleus and cytoplasm.",
J. Biol. Chem. 271:22081-22089(1996).
-!- FUNCTION: The B regulatory subunit might modulate substrate
selectivity and catalytic activity, and also might direct the
localization of the catalytic enzyme to a particular subcellular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -RNA;(N).
-!- SUBUNIT: In chloroplasts, the RNA polymerase is composed of four subunits: alpha, beta, beta', and beta'.
-!- SUBCELLULAR LOCATION: Chloroplast.
-!- SIMILARITY: Belongs to the RNA polymerase beta chain family.

         "Crystal structure and induction mechanism of Amic-AmiR: a ligand-regulated transcription antitermination complex."; EMBO U. 18:5175-5186(1999).
-!- FUNCTION: Positive controlling element of amiE, the gene for aliphatic amidase. Acts as a transcriptional antitermination factor. It is thought to allow RNA polymerase read through a rhoindependent transcription terminator between the amiE promoter and
